

## **Why I like the Ontario Science Centre Science School...**

### **Jeremy, Semester 56**

- It has given me an opportunity to meet with other motivated students and work together with them on many different projects. From this I have learnt how to take into consideration others ideas as well as effectively communicate my own.
- I can talk and have conversations about interesting scientific topics with others without being called a “nerd”.
- It has opened the doors to so many opportunities being in a new city and environment: I got a job in Biomolecular research over the summer, became a part of the SCI FRI youth council and was inspired to travel to Africa.
- I can seek one on one assistance from any of my teachers if I am having difficulty understanding a concept.
- I have improved my fear of public speaking by communicating with guests
- By working as a host over the March break I gained a new respect for the curiosity of the general population when it comes to science.
- I can offer my suggestions to teachers on possible lesson plan ideas or fun experiments.
- The resources here are far more than I could have hoped for at my home school.
- It made learning fun again. By incorporating amore hands on approach as well as abstract teaching methods (not by the book).
- It helped better prepare me for university having very different teaching styles amongst teachers.
